

AI Full Stack Engineer Assignment

Activity: AI Campaign Copy Generator

Objective

Build a simple AI-powered tool that generates marketing copy for an ecommerce campaign.

The user should enter product and campaign details, and the system should generate marketing copy for multiple channels.

User Flow

1. User enters campaign inputs.
2. System generates copy using AI.
3. User can view the generated outputs in a simple UI.
4. User can copy each output.

Input Fields

Minimum required inputs:

- Product name
- Product description
- Offer / discount
- Target audience
- Campaign objective
- Tone of voice

Example Input

Product: AirStride Running Shoes

Description:

Lightweight running shoes designed for everyday runners. Features breathable mesh, cushioned sole, and anti-slip grip for maximum comfort.

Offer:

20% Off + Free Shipping

Target Audience:

Men and women aged 20–40 who are looking for comfortable running and walking shoes.

Campaign Objective:

Drive purchases during the weekend sale.

Tone:

Energetic and persuasive

Minimum Output Required

The AI should generate:

- 5 email subject lines
- 3 email preview texts
- 1 promotional email
- 1 WhatsApp message
- 1 SMS message

Output Expectations

The generated copy should:

- Be relevant to the product
- Match the target audience
- Highlight the offer naturally
- Include a strong call-to-action
- Be suitable for an ecommerce brand

Technical Freedom

The developer can choose:

- Any frontend framework
- Any backend framework
- Any database, if needed
- Any LLM
- Any deployment/local setup

A database is optional for this assignment.

Submission Deadline

The activity must be completed within **24 hours**.

Submission Requirements

1. **Accessible GitHub repository**
 - Source code
 - README with setup instructions
 - Brief architecture explanation
2. **Markdown file of LLM conversations**
 - Important prompts/conversations used during development
 - Mention the LLM/tool(s) used

3. Recorded demo video

- Demonstrate the input form
- Show the generated outputs
- Demonstrate copy functionality (if implemented)
- Ensure proper sharing permissions

Evaluation Criteria

- Working end-to-end application
- Quality and relevance of AI-generated copy
- Simple and intuitive user interface
- Effective use of AI
- Well-structured code
- Clear README and demo

Bonus (Optional)

- Multiple copy variations
- Different writing tones (e.g., professional, playful, premium)
- Regenerate individual sections
- Export outputs as Markdown or PDF
- One-click copy for each generated section
